August 8, 2017, update for Project Server 2013 (KB4011082)

This update fixes the following issues:

- If you apply a filter that uses the **Does not Contain** filter test to a project that you are editing in Project Web App, tasks that have the filtered characters are still displayed.
- Consider the following scenario:
 - You have a project-level custom field that's defined.
 - A lookup table is associated with the custom field.
 - The lookup table allows multiple values to be selected.
 - You publish a project where multiple values are selected from the lookup table for the given custom field.

In this situation, the report may show multiple copies of the same lookup table value.

- Consider the following scenario:
 - You have a local custom date field that's defined by using a formula.
 - The formula rollup behavior is set to display either the minimum or maximum date value.

- You edit a project in Project Web App and supply data into the fields that drive the formula in the local date field.

In this situation, the date value does not roll up to related summary tasks.

- When you try to rename a project that has a required project level custom field from Project Professional 2013, you may receive the following error message:

Renaming project failed with error code hr = 0x80020009

- When you try to rename a project to a name that contains the ampersand (&) character, you receive the following error message:

Renaming project failed with error code hr = 0x80020009

[August 8, 2017, update for SharePoint Server 2013 \(KB4011071\)](#)

Improvements and fixes

- This update enables the hybrid content type for Black Forest tenants. More accurate user name mapper will be used in the hybrid content type migration.
- This update adds a checkbox (Create Site Collections in SharePoint Online) on another self-service site creation page to enable hybrid self-service site creation.
- This update improves the translation accuracy for some terms in multiple languages versions of SharePoint Server 2013.

This update fixes the following issue:

- Tenant users cannot crawl documents that contain invalid Unicode sequences by using hybrid search.

[August 8, 2017, update for SharePoint Foundation 2013 \(KB4011079\)](#)

Improvements and fixes

- This update enables the hybrid content type for Black Forest tenants. More accurate user name mapper will be used in the hybrid content type migration.

- This update adds a check box (**Create Site Collections in SharePoint Online**) in another self-service site creation page to enable hybrid self-service site creation.
- This update improves the performance of the **Variation List Propagation** timer job after you update list items to a target source.
- This update corrects a HTML heading structure issue in the **Discussion Board** views.

This update also fixes the following issues:

- Deleted users are imported unexpectedly through a backup by using the SharePoint Content Migration APIs (previously known as the PRIME APIs), even if you have deleted the users from Active Directory.
- The **Name** column in a Gantt view in a document library does not display the expected values.
- The `stsadm setpropertycommand` unexpectedly creates empty nodes under **m_OleDbProviders**. This causes intermittent high CPU.
- Project view displays a failure in Edit mode if you enable the **Custom Duration X** setting in the Gantt Chart Format list.
- The time for the iCal event is incorrect if you set the Time zone to Brasilia in the website's **Regional Setting**.
- When you edit a task and select **Show More**, the focus isn't set on the first uncovered field as expected.

[August 8, 2017, update for SharePoint Foundation 2013 \(KB4011083\)](#)

Improvements and fixes

- This update enables the hybrid content type for Black Forest tenants. More accurate user name mapper will be used in the hybrid content type migration.
- Translates some terms in multiple languages to make sure that the meaning is accurate.
- Translates the **Open Menu** link that JAWS uses to open the Edit Control Block (ECB) menu in a document library in multiple languages.

August 8, 2017, update for SharePoint Server 2016 (KB4011053)

Improvements and fixes

- This update enables the hybrid content type for black forest tenants. More accurate user name mapper will be used in the hybrid content type migration.
- Translates some terms in multiple languages to make sure that the meaning is accurate.

August 8, 2017, update for SharePoint Server 2016 (KB4011049)

This update includes the following improvements and fixes for SharePoint Server 2016:

- This update enables the hybrid content type for Black Forest tenants. More accurate user name mapper will be used in the hybrid content type migration.
- Translates some terms in multiple languages to make sure that the meaning is accurate.
- This update makes sure that the My Site Cleanup Timer job will delete user profiles for deleted users.

This update also fixes the following issues:

- Assume that you upload a .docm file that contains macros to SharePoint. After you use Word Automation Services to convert it to a .doc file, the macros are no longer present.
- The date and time is displayed in an incorrect time zone in the conversation section of a pending access request.
- When you try to click a shared link to a Microsoft OneDrive for Business folder that contains non-ASCII characters, the link can't redirect you to the folder.
- When you use the Remote Event Receiver in a SharePoint environment that uses a language with multibyte characters, you experience an exception.
- A site that has a trailing slash in the site URL can't be restored.

This update fixes the following issues for Project Server 2016:

- When you try to rename a project that has a required project level custom field in Project Professional 2016, you may receive the following error message:

Renaming project failed with error code hr = 0x80020009

- When you try to rename a project to a name that contains the ampersand character, you receive the following error message:

Renaming project failed with error code hr = 0x80020009

- After you drill into a project and open the Project Detail page in the Project Center, you may receive the following error message:

Sorry, something went wrong

An unexpected error has occurred.

Web Parts Maintenance Page: If you have permission, you can use this page to temporarily close Web Parts or remove personal settings. For more information, contact your site administrator.

This error occurs if you don't have the Open Project permission.

- The **Name** column in a Gantt view in a document library does not display the expected values.
