Description of the security update for SharePoint Foundation 2013: May 8, 2018 (KB4018398)

- After you install the [security update for SharePoint Foundation 2013 \(KB3172540\)](#), SharePoint Server 2013 is in an inconsistent state.
- Assume that you enable McAfee Security for SharePoint Server 2013. When you access a large OneNote file that has an attachment in SharePoint Server 2013, an application pool crashes intermittently.
- When a view has a **Totals** row for any columns and the Tabular View disabled, the Totals row is misaligned and the totals don't appear under the appropriate column.

Description of the security update for SharePoint Server 2013: May 8, 2018 (KB4018390)

This security update contains improvements and fixes for the following nonsecurity issue:

- This update improves Swiss translation.

Description of the security update for SharePoint Server 2013: May 8, 2018 (KB4018388)

- This security update resolves vulnerabilities in Microsoft Office that could allow remote code execution if a user opens a specially crafted Office file. To learn more about these vulnerabilities, see [Microsoft Common Vulnerabilities and Exposures CVE-2018-8161](#).

Description of the security update for Project Server 2013: May 8, 2018 (KB4022130)

This security update contains improvements and fixes for the following nonsecurity issues:

- After you publish a project plan, you look at the Manage Queue Jobs page and find that the ManagedModeTaskSynchronization job has failed, and you see error details similar to the following:

GeneralQueueJobFailed (26000) -
ManagedModeTaskSynchronization.SynchronizeTaskListInManagedModeMessage.

- The title on a Project Detail Page shows the "&" (ampersand) character displayed as "&".
- When you try to open a project from the Project Center while using Internet Explorer 11 in Windows 7, you receive the following error message:

Action Not available. Project Professional needs to be installed to open the project. Install project and try again.

- Status managers see the following error message in the status updates history page:

_error loading

- Consider the following scenario:
 - As a team member, you open your timesheet and enter work for two adjacent days.
 - On the first day, you set the actual work value back to zero.
 - On the first day, you set 8 hours of non-working time on an administrator task (for example, vacation)
 - You send a status update for approval.
 - You open the previous week timesheet.
 - You enter actual work values.
 - You send the timesheet for approval, and the status manager approves it.

In this case, the actual work entered on the second of the two days moves to the first day. The actual work should not move when the status update is applied to the project.

- This update fixes the CTRL+S keyboard shortcut save functionality on Project Detail Pages for the Arabic, Finish, and Portuguese versions.

Description of the security update for SharePoint Server 2016: May 8, 2018

This security update contains improvements and fixes for the following nonsecurity issues in Project Server 2016:

- If the proxy for the Project Service Application services already exists when you create a new Project Service application by using **Install-SPService – Verbose** command, an additional proxy for the service is created.
- Consider the following scenario:
 - As a team member, you open your timesheet and enter work for two adjacent days.
 - On the first day, you set the actual work value back to zero.
 - On the first day, you set 8 hours of non-working time on an administrator task (for example, vacation)
 - You send a status update for approval.
 - You open the previous week timesheet.
 - You enter actual work values.
 - You send the timesheet for approval, and the status manager approves it.

In this case, the actual work that was entered on the second of the two days moves to the first day. The actual work should not move when the status update is applied to the project.

- When you publish a project in which the process updates the Summary Resource Assignment to a later date, the publish fails if the server is configured to use a date format other than *MM-DD-YY*.

This security update contains improvements and fixes for the following nonsecurity issues in SharePoint Server 2016:

- When an item is deleted from the usage analytics caches, the item is now also deleted from the analytics reporting database.
- If you don't have sufficient permission to mount a content database to a farm by using the [Mount-SPContentDatabase](#) cmdlet, the cmdlet fails and the database is dropped unexpectedly.
- This update introduces the "My Site creation default to OneDrive in Office 365" hybrid feature in SharePoint Server 2016. After you install this update and enable this feature, hybrid-enabled users can have their OneDrive personal sites provisioned in the cloud instead of on-premises. On-premise only users can still have their OneDrive personal sites provisioned on-premises.
- You cannot use the SharePoint Term Store Management UI in browsers other than Internet Explorer.
- The WebPart.ZoneID property is unavailable in the Web Part information.
- SharePoint emails that are longer than 1,000 characters could become corrupted at the 1,000-character position. Depending on what content happens to be at that position, the corruption could be minor (corrupted text) or severe (broken HTML markup).
- This update fixes the following three issues with the SharePoint Properties Panel:
 - When you save a SharePoint properties panel with required properties for the first time, you cannot find the properties.
 - The DateTime format is assumed to *MM/DD/YY*.
 - Drop-down of lookup type is set to *nil* when the label is selected.

May 8, 2018, update for SharePoint Enterprise Server 2016 (KB4018386)

This update fixes the following issue:

- If you don't have the sufficient permission to mount a content database to a farm by using the [Mount-SPContentDatabase](#) cmdlet, the cmdlet fails and the database is dropped unexpectedly.
- This update contains the following improvements:

- Provides correct translation of product names.
 - Translates a message when a management view cannot be accessed.
 - Fixes CTRL+S functionality for Arabic version, Finnish version and Portuguese version for Office 2016 products.
-
- This update translates some terms in multiple languages to make sure that the meaning is accurate.
 - This update improves the Swiss translation and the translation for the ribbon hotkeys for Russia.
