## October 9, 2018, update for SharePoint Foundation 2013 (KB4461459)

This update fixes the following issue:

- When you click a document URL in the contents of the version of a document under the Document Set, the document isn't displayed and you see an HTTP 404 error page. This issue occurs when the URL of the site collection contains a space

## Description of the security update for SharePoint Enterprise Server 2013: October 9, 2018

This security update contains improvements and fixes for the following non-security issues:

- Assume that you type @ to mention someone in a post in Discussion, and the user is verified successfully. When you press the space key, the location of the cursor in the post is not set correctly.
- When you click a document URL in the contents of the version of a document in the Document Set, the document isn't displayed, and you see a HTTP 404 error page. This issue occurs when the URL of the site collection contains a space.
- This update adds the ability to search content of an Office365 Private Group from the on-premises search center in a hybrid search.

## October 9, 2018, update for SharePoint Enterprise Server 2016 (KB4092463)

This update improves the Dutch translation of the error message that's displayed when you follow a document.

## Description of the security update for SharePoint Enterprise Server 2016: October 9, 2018

This security update contains improvements and fixes for the following nonsecurity issues for SharePoint Server 2016:

- When you open the Office 365 OneDrive site from on-premises SharePoint Server 2016 environment, the **Top Navigation** bar is not displayed correctly.
- If a site collection is configured to use the Security Assertions Markup Language (SAML) Claims provider for the authentication and a SAML account is specified as the site collection administrator, the SAML account can't be added as an administrator of the term store via Central Administration.
- When you click a document URL in the contents of the version of a document in the Document Set, the document isn't displayed, and you see a HTTP 404 error page. This issue occurs when the URL of the site collection contains a space or other supported special character.
- This update adds the ability to search content of an Office365 Private Group from the on-premises search center in a hybrid search.
- When you add or remove reusable content under "Site Contents" in a Wiki subsite, checking or unchecking the **Show in drop-down menu** check box does not affect whether the reusable content is shown in the drop-down menu.
- This update improves the reliability of copying files and folders inside a document library in highly concurrent scenarios.

- When you click the **Cancel** button in the Content Approval page, nothing happens.
- This update addresses some intermittent performance issues.

This security update contains improvements and fixes for the following nonsecurity issues for Project Server 2016:

- This update adds support for cost resources in the Client-Side Object Model (CSOM) in Project Server 2016. Now, you can create or get a cost resource through CSOM.
- This update adds the ability to set the [LookupAllowMultiSelect](#) property on the [CustomField](#) class in the Client-Side Object Model (CSOM).
- This update adds support for the **HyperlinkURL** and **HyperlinkName** properties to the [EnterpriseResource](#) class in the Client-Side Object Model (CSOM).
- This update adds a **IsLeafOnly** property to the [CustomField](#) class in the Client-Side Object Model (CSOM). Through this property, you can get or set a value that indicates whether the custom field value must be a leaf node in the lookup table.
- The data of an inactive resource assignment incorrectly affects availability on Capacity Planning reports.
